16A 3pin AC Power cord

Liwet Technologies LLP is established in 2014 ,started its operations with the sole motive of delivering high quality Electronics Research and Development.

We specialize in Embedded systems and Firmware Designs, Project Management, Sub-Contracted Manufacturing services and high quality PCB fabrication. Our product design, development, and prototyping service will enable you to transform your product idea from initial concept to production-ready design. Whatever stage your project is at, our in-house team of electronics engineers, product designers and production engineers can really add value. With our team's combined experience and a broad portfolio of leading-edge design tools, we can undertake your complete project or any single element of it. All of our manufacturing and design processes conform to the strict quality levels required by our quality management system.
